Adjustable height settings of 30, 34, and 38 inches for operator convenience in any environment.

Cardinal Scale model CA12-120-190 USA-made washdown bench scale sold separately.

Cardinal Scale's USA-made bench scale carts provide a mobile weighing option for EB series and Admiral bench scales. These rolling carts are constructed of high-quality stainless steel that increases the life span of the carts in harsh work environments and allows you to wash them down for sanitary conditions. A Cardinal bench scale may be mounted to the upper shelf for stability while transferring items on and off the scale while weighing. The top shelf additionally features an exposed center section so that debris doesn't accumulate underneath the scale. The interior shelf provides storage necessary for any application. These carts are equipped with locking casters that provide safety and stability when weighing and provide truly portable bench scale weighing. They ship flat packed for major savings on shipping costs (assembly required).

CART2018:
