

StayFlat® Sheet Pans

StayFlat® Sheet Pans have sidewalls that are continuously reinforced with an engineered rib that increases its sidewall strength up to 30%. This feature coupled with a concave bottom and residual tensile stress results in a pan that resists bowing and stays flat longer!

Reinforced Sides Prevent Flaring

StayFlat® Sheet Pans feature sidewalls that are continuously reinforced with a horizontal engineered rib. This feature increases sidewall strength up to 30% and provides an easy visual identification reference for situations where stronger, flatter sheet pans are required, such as for transport or for baking pies and cakes.

Increased Tensile Strength

A proprietary manufacturing method imparts a residual tensile stress in the StayFlat® pan bottom, which further increases the strength of the pan and resists damage from denting or bowing.

Concave Bottom Resists Bowing

The method used to increase tensile strength of the StayFlat® pan bottom also creates a slightly concave bottom that flattens during heating for even heat distribution and increased resistance to bowing.
