

THE ART OF BLENDING

*Introducing Advanced Blending Control*

Blending just got easier with *Blendtec A.B.C.*<sup>™</sup>—the perfect blend of brains, brawn, and beauty.

## Still the Innovation Leader

K-TEC pioneered the first blender with programmed blend cycles, the first in-the-counter blender, and the first quiet blender. That was in 1995. Today, Blendtec sets a higher standard with its exclusive *Advanced Blending Control™* (A.B.C.) blender.

# Blending as easy as A.B.C.

**A**utomatic Start Close the sound enclosure and the *Blendtec A.B.C.™* runs the last program selected and shuts off when the blend cycle is complete.

**B**lender Safety The *Blendtec A.B.C.™* locks in safety. It won't start until the sound enclosure is closed, and stops when it is opened.

**C**ustomer Programming  
Now you can custom program your 6 blending control buttons just the way **you** want.

# Brains

## CUSTOMER PROGRAMMING

First, plug your *Blendtec A.B.C.™* blender into your personal computer and run a copy of our *Blend Profile Programming™* software. Now, with a few clicks of the mouse, you can easily program a custom profile of changing blade speeds for each kind of drink. And with several profile buttons to choose from, you need only the *Blendtec A.B.C.™* to create a full menu of blended beverages. *Advanced Blending Control™* assures uniform drink consistency.

## JUST CLOSE THE LID!

For the safest, quickest, and easiest operation, nothing beats the Automatic Start feature with our *Electronic Interlock Technology™*. Simply close the sound enclosure and let Blendtec do all the work.

*Electronic switch runs the last program selected when lid is closed.*

# Brawn

## 50% MORE POWER

Blendtec delivers 50 percent more power than other commercial blenders. Your drinks are made in less time with less wear and tear on the motor.

## ONE TOUGH MOTOR COUPLING

Your motor coupling will never break or wear out. We warranty it for life! The surrounding foundation is a highly polished stainless steel casting that will last forever.

## 100% SOLID-STATE ELECTRONICS

A sleek membrane touchpad controls the most advanced blending electronics on the market—eliminating less reliable knobs, dials, and switches that often break or wear out.

*LEDs show which blend program has been selected.*

## THE WIDEST, HEAVIEST-DUTY BLADE

Big ice cubes? Frozen fruit? Bring it on! No blending job is too tough for this rugged blade.

*Blade wing-span of almost 4 inches*

# Beauty

## ATTRACTIVE, FUNCTIONAL DESIGN

The *Blendtec A.B.C.*<sup>TM</sup> is more space efficient by sporting a lower-profile design and smaller footprint. The half-gallon jar is shorter and half the weight of other jars with comparable volume. Jars are stackable to save even more space.

Our virtually unbreakable jar features easy-to-read measurement marks and can be personalized with your logo. The quick-fit lid comes off with the flip of a thumb.

*Blendtec jars feature easy grip handle, vibration isolated blade, high-capacity shape, and 3-directional pouring.*

## ABOVE-COUNTER AND IN-COUNTER, IT'S A BEAUTY!

Blendtec's easily convertible design allows you to install it **above** the counter and **in** the counter—anywhere you want. It's versatile.

## SOUNDS BEAUTIFUL

"Shhhh." Our blenders are often found in bookstore cafes. What you hear is the quiet sound of precision and hand-crafted quality.

*Above-Counter Smoother*<sup>TM</sup>

*In-Counter Smoother*<sup>TM</sup>

# Blendtec A.B.C.<sup>™</sup> with Advanced Blending Control

Heavy-duty 13 AMP or 18 AMP motor. The most powerful motor available. • Half-gallon GE Lexan<sup>®</sup> Jar. • Liquid Crystal Display (LCD) reports cycle counts and diagnostics. • Acrylic sound enclosure offers bright, clear, 360<sup>°</sup> visibility.

## Footprint Dimensions:

- Above-counter placement:  
9" W X 9" D X 17" H
- In-counter placement:  
9" W X 9" D X 11" H  
Motor extends 5 1/4" below  
counter surface. Drops into a  
4 1/4" X 5 3/4" counter hole.
- 110/120 Volt, 50/60 Hertz
- 220/240 Volt, 50/60 Hertz

## Warranty

Lifetime warranty on motor  
drive spline and blender blade.  
Three years or 20,000 cycle on  
motor base.
